

## Volvo IT decided on RAV AntiVirus

*'Project Schools' will provide AV protection to mail clients used by over 200,000 students in Sweden.*

*After testing several solutions chosen from the best, Volvo IT decided on RAV AntiVirus.*

([PRWEB](#)) November 23, 2002 -- Starting with October 2002, Volvo Information Technology AB (Volvo IT) is implementing RAV AntiVirus for Mail Servers to schools in Sweden. This is a part of a process of developing a commercial project aiming at providing Swedish Schools and students with an operational computing platform. The entirety of the installation will be operated and supported by Volvo IT, from its headquarters in Gothenburg, Sweden.

The main feature of this computing environment is that it intends to supply the students with a wide choice of applications as well as an easy access to computer-based communication. E-mail is of course of the essence when it comes to computer communication; anti-virus questions, as a corollary of electronic mail, naturally came into focus. After testing several solutions chosen from the best, Volvo IT decided on RAV AntiVirus.

The entirety of the installation will be operated and supported by Volvo IT and the mail servers located in Gothenburg will filter and guard from electronic threats the mail traffic generated.

**Volvo Information Technology**, Volvo IT, provides the Volvo Group, the Volvo Car Corporation and selected external customers with complete IT solutions.

Volvo IT's main operating areas are data processing, the development of methods, systems and technology, data communication, telecommunication and identified areas for the future.

Volvo Information Technology is a wholly-owned subsidiary of the Volvo Group.

**RAV AntiVirus** leading product, RAV AntiVirus for Mail Servers, is the ideal solution for security and protection of Linux based MTAs. Besides its scanning capabilities, reinforced by cutting edge technologies providing speed and high reliability, RAV AntiVirus for Mail Servers includes an AntiSpam module integrated in the last version of the product, as well as content filtering and group configuration modules, all of them being configurable from scratch to the custom working scheme designed by the administrator.

RAV AntiVirus is developed by GeCAD Software, a leading Romanian IT company based in Bucharest. The RAV AntiVirus line of products is represented worldwide by a network of over 100 partners located in countries from all continents. RAV Antivirus products family also includes: RAV AntiVirus Desktop, RAV AntiVirus MailFilter and RAV AntiVirus for File Servers (Linux and Win32).
