

## **Just in Time for the Holidays: Pukka Electric Minibikes Now Available in the Tri-State**

*With the holidays just around the corner, eBikes of Ohio, LLC today introduced the Pukka Electric Minibike to the Tri-State area. The Pukka Electric Minibike, which features BMX styling and a monoshock suspension and frame, combines the soul of an old gas mini-bike with 21st-century technology to deliver unique features and performance. eBikes, based in Liberty Township, Ohio, is currently the only authorized dealer of Pukkas in the state.*

CINCINNATI, OH ([PRWEB](#)) November 10, 2004 -- With the holidays just around the corner, eBikes of Ohio, LLC today introduced the Pukka Electric Minibike to the Tri-State area. The Pukka Electric Minibike, which features BMX styling and a monoshock suspension and frame, combines the soul of an old gas mini-bike with 21st-century technology to deliver unique features and performance. eBikes ([www.ebikesofohio.com](http://www.ebikesofohio.com)), based in Liberty Township, Ohio, is currently the only authorized dealer of Pukkas in the state.

Unlike many of today's noisy gas scooters and dangerous pocket bikes, Pukka is completely electric and offers safety features that are not available on competitor products. The Pukka difference is found in the bikes high-efficiency, 400-watt motor, case-hardened frame, upgraded brush-tensioning system, and four-brush design. The Pukka's battery pack is a deep-cycle, rapid-discharge technology, which is considered too expensive by many scooter and electric bike manufacturers, but essential for Pukka's performance. The heart and soul of the Pukka is its proprietary Pulse Width Modulator, which pushes the bikes reliability, produces the bikes high performance, conserves energy when it can and delivers a significant 55 amps when necessary.

"The Pukka is a unique mini-bike that looks and performs better than many of the more expensive models on the market," said James Wilson, partner, eBikes of Ohio. "People have a lot of choices when it comes to buying scooters or mini-bikes. Unfortunately, if they are buying off-the-shelf scooters or electric bikes, they will find the cheapest materials, motors and batteries that money can buy. They will not find quality craftsmanship, custom engineering and fine tuning. The result, of course, is predictable; an underperforming scooter.

"One look at a Pukka and you will see that it was made with safety and quality in mind. When you combine the Pukka's quality, performance, long-lasting battery life and safety features, you will not be able to find a better product for the money. The Pukka is a perfect gift for ages 11 on up, and also makes for a fun employee gift and prize at corporate holiday parties."

Pukka offers the following performance and features (performance based on rider size):

- Top speed: 17-19 miles per hour, 14 miles per hour with Parental Speed Control enabled;
- Battery life: Up to 24 miles per charge;
- Acceleration: 0-17 miles per hour in 3-5 seconds;
- Highly efficient 400 watt motor;
- Thumb-activated accelerator;
- Oversized tube monoshock suspension;
- BMX-style handlebar and stem;
- Puncture resistant tubeless tires; and
- Built for individuals up to 220 lbs.

Considered by Electric Scooter World as "one of the best performing electric scooters under \$1,000," Pukka's are available for \$329.95 plus tax. (A 2 Amp charger is included.)
