

World's First Motorcycle Heads up Display Building Worldwide Network

The first-ever Heads Up display for motorcycles gains world-wide exposure

([PRWEB](#)) May 11, 2005 -- The makers of the first-ever Heads Up Display System for motorcycle riders have just added four more countries to a growing world-wide distribution network. Motion Research Corporation is proud to announce that its SportVue MC1 is now available for sale in Italy, Great Britain, South Africa, and the Ukraine, as well as in the US.

The powerful, patented SportVue display system mounts onto full-face helmets and gives riders a view of speed, rpm, and gear. The data appears in a helmet-mounted display, focused at infinity. This breakthrough technology frees the rider from distracting glances down at dash-mounted gauges. Radar-detection and navigation features will be available soon. For more product information, go to www.sportvue.com.

As the world-wide network for SportVue distribution grows, individual dealers in the US and Canada are also sought for a limited time. For details of a special new dealer sign up program, call (206) 352 1771 ext. 118 or e-mail reseller@sportvue.com.
