

All Traffic Solutions Adds Two Large Format Message Boards and Radar Speed Signs to Product Line

InstAlert 48 and InstAlert 68 offer NTCIP compliance and connectivity via the TrafficCloud open extensible platform

Herndon, VA ([PRWEB](#)) August 02, 2017 -- All Traffic Solutions, the leader in cloud-based traffic management solutions for law enforcement, transportation and smart cities announces today that it has added two large format message boards to its InstAlert family of variable speed message signs. The InstAlert 48 and InstAlert 68 offer the same web-based connectivity that allows users to change messages and access traffic data remotely via the TrafficCloud open extensible platform, as well as the flexibility to configure the signs as either variable message signs or radar speed displays to maximize sign usage.

Because All Traffic Solutions signs are NTCIP-compliant they can be incorporated onto one platform along with legacy devices from other manufacturers' equipment as part of an Intelligent Transportation System, allowing organizations to leverage their investments. The company provides the connectivity and management infrastructure via their TrafficCloud™ web-based remote management system— an open, extensible scalable solution for all signs, devices and sensors accessible via a standard protocol.

“Departments of Transportation of all sizes are more cognizant than ever of the importance of planning and building scalable intelligent transportation systems. By leveraging our web-enabled, NTCIP-compliant variable message signs and radar speed displays together with our TrafficCloud traffic management ecosystem, municipalities can realize their smart cities vision.” said Andy Souders, All Traffic Solutions CTO and Vice President of Engineering.

For information on All Traffic Solutions products including web-enabled variable message signs, radar speed displays and vehicle count and classification devices visit <http://www.alltrafficsolutions.com/products>.
