

Modified Infant Carrier Invented by InventHelp Clients (SFO-173)

Based in Pittsburgh and founded in 1984, InventHelp is submitting the 2 EASY CAR SEAT to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) January 05, 2016 -- “Carrying a traditional infant car seat left me with a sore and injured back,” said one of two inventors, from San Bruno, Calif. “We thought there had to be an easier way for parents to transport their little ones, so we invented this.” They invented the patent-pending 2 EASY CAR SEAT.

The 2 EASY CAR SEAT provides an easier way to travel with an infant or small child. In doing so, it eliminates the need to transfer the child from a carrier to a stroller. As a result, it could help to prevent stress and strain on the arms and back and it enhances comfort. The invention features a versatile design that is convenient and easy to use so it is ideal for parents with young children.

The inventors described the invention design. “Our design offers a more convenient and practical alternative to traditional child carriers.”

The original design was submitted to the San Francisco office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-SFO-173, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
