

Newly Launched Vision Cam Offers Driving Instructors New Perspective and Added Safety

Wide Angle Rear View Camera Helps Driving Instructors Monitor and Record Learner Drivers Via Their Mobile Devices

Warrington, Cheshire (PRWEB UK) 6 January 2016 -- Vision U.K., an innovative technology firm, announced today the launch of the Vision Cam, a wide angle rear view camera designed for driving instructors. The high definition camera helps make teaching someone to drive less stressful by providing an unrestricted rear view for added safety.

The Vision Cam is easily attached to the rear window and then monitored via iOS or Android devices after the Vision Cam app has been downloaded. The camera allows driving instructors to help learner drivers more effectively monitor hazardous conditions on the road, as well as record driving sessions.

“The Vision Cam is poised to revolutionize driver education,” said Richard Treherne, managing director. “23 percent of new drivers between the ages of 18 and 24 crash within two years of passing their driving test. The Vision Cam will help driving instructors better prepare new drivers for the risks of the road, helping to make them more aware of their surroundings and improve their defensive driving techniques.”

The Vision Cam rear view camera retails for £99.95. Bundles, which include a 12v in-car power lead, flexible goose neck windscreen suction cup mount and car charger extension, are available for £109.95.
