

New Fuel Pill Increases Gas Mileage 15%-35% - Cleans Engine, Too

"If GM kept up with technology like the computer industry has, we would all be driving \$25 cars that got 1000 MPG." - Bill Gates.

Technology is finally starting to catch up.

Orem, UT ([PRWEB](#)) January 5, 2006 -- How is it possible that the first Model T averaged 17 miles per gallon and the gas mileage of the new Ford Explorers is exactly the same?! BioPerformance has asked itself the same question. And, in doing so, on December 1, 2005, BioPerformance released a product called "BioPerformance Fuel" to people all over the USA that has incredible fuel saving power. In choosing either the pill or powder, a driver inserts it into his/her gas tank prior to filling up. The result of this incredibly easy step is a reduction in emissions, a cleaner engine, and up to 35% better gas mileage. Numerous testimonials, additional information on reduced emissions and how this amazing pill works can be read on the company website at www.pillpower.mybpbiz.com.

Along with offering significant fuel savings, BioPerformance also offers a networking opportunity to earn income by sharing their revolutionary gas pill with others.

To find out more about their breakthrough product, how you can sample the product for yourself, or to find out more about this unprecedented networking opportunity, visit the following website www.pillpower.mybpbiz.com.
