

InventHelp Inventor Develops Convenient Boat-Trailer Washer (HTM-965)

Pittsburgh-based InventHelp is attempting to submit this idea, the Trailer Wash, to companies for their consideration and possible feedback.

Pittsburgh, PA ([PRWEB](#)) January 01, 2014 -- "I wanted to come up with a better way to wash a trailer clean," said an inventor from Hampstead, N.C. "I have spent a lot of time washing trailers, and I always thought that there had to be a better way. My invention also uses water more efficiently."

He developed the TRAILER WASH to make it easier to wash a boat's trailer, rinsing off saltwater. The unit features a water-efficient design. The invention allows boats to be launched and recovered more quickly and easily, which keeps the dock from getting backed up. It is designed to save water, time, money and labor hours. Additionally, it is producible in a home-use version as well.

The original design was submitted to the Houston office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 12-HTM-965, [InventHelp](#), 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
