### **NEW FUEL PRODUCT MEANS YOU CAN RUN YOUR DIESEL CAR ON USED VEGETABLE OIL!**

Rhode Island, USA, November 29, 2001 — Chinadepot launches a new kind of fuel saver, the greasel. Using this conversion kit, diesel drivers can now run their cars on used vegetable oil, available in gallons from most restaurants. This product is now ready for marketing worldwide through Chinadepot.

Ready and easy to install by a non-mechanic, the Greasel conversion kit allows diesel drivers to run any diesel on free waste vegetable oil. The key to running a diesel on vegetable oil is heat, provided to the special tank and fuel line by the hot coolant your engine is already producing. The engine is started and brought up to temperature on regular diesel. When the engine and tank of vegetable oil is warm you simply flip a switch on your dashboard. The fuel solenoid switches you from diesel to vegetable oil and suddenly you're going down the road for free! Other benefits include no loss of power, a cleaner exhaust, a better lubricated engine, and cleaner fuel emission. About 5 minutes before you get to your destination, switch back to diesel to clear the injection pump and fuel lines of vegetable oil.

Chinadepot is now seeking worldwide dealers and distributors. For more information on the greasel units and Chinadepot, visit <http://www.chinadepot.com> or call USA 1 401 725 8141. Chinadepot is a global web and bricks and mortar wholesaler of innovative products through its web site.
