

J&M Products Announces Stainless Steel Brake Hose Kit for 2005-2014 Ford Mustangs

Stainless Steel Brake Hose Kit, Improve Braking Direct Fit Part [22530](#)

San Luis Obispo, California ([PRWEB](#)) March 03, 2016 -- [J&M Products](#) announces an all new direct fit, PTFE lined brake hose kit. J&M's front and rear brake hose assemblies are a complete kit, utilizing original equipment manufacturers style direct replacement, non-universal fittings to achieve proper factory hose routing and fitment. Expansion of stock rubber hoses can cause a spongy brake pedal feel and loss of initial braking force. Installation of our PTFE-lined stainless steel hose assemblies will give your cars brakes a firmer pedal feel, quicker braking response, and easier brake modulation. Every hose is tested to 3000 psi for a guaranteed leak free hose assembly.

J&M Stainless Steel Mustang brake hose kits are custom designed for high spirited street performance, autocross, drag racing and all out road race events. J&M has designed a brake hose kit that allows for high temperature operation under extreme racing conditions for longer life while participating in the most grueling motorsports events. The unique design allows for a direct fit with original equipment style brackets so that no adaptors are necessary. Factory style brackets are trivalent zinc plated for corrosion resistance and long life.

J&M Products designs and manufactures quality high performance aftermarket auto parts and suspension components in San Luis Obispo California for late model [Mustangs](#) and Camaros. All products are constructed with the highest quality components; rigorously track tested and sold through the [Hotpart.com](#) website and their dealer network.
