

## **Back-Up Device Invented for Towed Vehicles - Designed by InventHelp Client (QCY-166)**

*InventHelp is attempting to submit this client's idea, the TRACE TRACKER, to companies for their consideration.*

PITTSBURGH, PA ([PRWEB](#)) December 18, 2015 -- InventHelp is attempting to submit this client's idea, the TRACE TRACKER, to companies for their consideration.

Backing up a trailer attached to a towing vehicle can be quite a challenge, particularly when trying to maneuver the trailer into a tight spot. Fortunately, an inventor from Dallas, N.C., has found a way to get the job done as easily as backing up a car.

He developed the patent-pending TRACE TRACKER to ease the task of backing up a trailer or other equipment attached to a towing vehicle. As such, it allows trailer to be backed up in the same tracks as the towing vehicle. At the same time, it provides optimum support, steering and control. Furthermore, it distributes weight better than a conventional trailer hitch. What's more, it is built to withstand the wear and tear of transporting heavy loads. It is also convenient, dependable and safe. In addition, it is versatile for use in towing farm equipment and trailers, construction equipment and other machinery, as well as movement of heavy office machines.

The inventor's personal observations inspired the idea. "While on camping trips, I noticed it was pretty common for campers to have difficulty backing up their trailers into a campsite. When I saw a driver give up and ask someone else to maneuver the trailer into place, I decided there had to be an easier way to do it," he said.

The original design was submitted to the Charlotte office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-QCY-166, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
