

InventHelp Inventor Designs Improved Trailer-Hitch Assembly (DRT-106)

InventHelp is working to submit the QUICK HITCH to companies for their potential feedback and consideration.

PITTSBURGH, PA ([PRWEB](#)) April 27, 2016 -- "It's dark, raining and just downright nasty, but you still have to find your trailer hitch and hook it into the receiver," said an inventor from Spruce, Mich. "You found the hitch, but where is the pin? It can be strenuous, time-consuming and dangerous to remove and install hitches on different trailers with different-size balls on them, so I decided to design a better hitch system."

The patent-pending QUICK HITCH streamlines the trailer-hitching process by eliminating the need to look and/or reach under the bumper. It also eliminates having to align or try to slide a keeper on the pin. As a result, it saves time and effort, as well as avoids accidents and injuries. Ergonomic and producible in design variations, it's ideal for campers, boaters, contractors, farmers, truck owners, etc.

The original design was submitted to the Detroit office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-DRT-106, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
