

Detroit Wrecker Sales Introduces The Strongest ‘In Bed’ Repo Unit Ever: The Gladiator

Detroit Wrecker Sales is excited to announce the official launch of The Gladiator, the strongest and most durable ‘in the bed’ repo unit ever. There is no other unit on the market with our Lifetime Warranty on Pins, Bushings, & Craftsmanship.

Detroit, Michigan ([PRWEB](#)) May 17, 2016 -- Benefits Of ‘In Bed’ Repo Units

The benefits of having a wheel lift mounted in the bed of a pickup truck are significant. These units are much cheaper than buying a light duty wrecker, capable of fitting into places other equipment cannot, and can be outfitted just like a much more expensive wrecker body. In bed units are judged for their ability to tow any size car, pickup truck, or SUV ability to disperse weight over the rear axle on the truck.

What Sets The Gladiator Apart From Other ‘In Bed’ Repo Units?

The Gladiator is not the first ‘in bed’ repo unit, but it is easily the best on the market. Here’s why...

Bronze Oil-Lite Bushings and Pins

The Gladiator units are outfitted at every pivot point with our long-lasting Bronze Oil-Lite Bushings and Pins for extra strength and reliability. All of the Pins and Bushings come with a lifetime warranty and are made to sweat oil in order to reduce rust, corrosion and overall maintenance.

Ability to Tighten Critical Pivot Points

Every critical pivot point on the Gladiator has the ability to be tightened over time so that the unit never becomes loose. Some units can be shaken by the touch of the crossbar and we do not want the unit to share those symptoms in the future causing major repair.

Steel Lines to Simplify Hydraulics

The Gladiator has steel hydraulic lines which eliminates the need to ever dismantle the entire piece of equipment to change a hose. Many other units fall victim to that repair and ours does not. There are short hoses running to the cylinders and the power unit however all are simple and within reach to replace very quickly and get you back on the road.

Massive Subframe

The huge subframe included on this repo unit is not only massive, but it’s incredibly strong and powerful. As a result, it causes weight to evenly disperse throughout the entire bed of the truck. This actively protects your truck frame from over loading and breaking.

Easy Installation

The Gladiator can be shipped all over the country with extensive how-to installation guides. The Gladiator was

designed to have one of the most simple installations ever. There are attachment angles that are the full length of the unit therefore the unit can be bolted to the most convenient spot, not trying to modify suspension or gas tank locations. The frame of the unit will match the width of your truck and as a result you get to enjoy simple and fast installation.

Available Integrated Bumper with DOT Approved Safety Chain Attachments

There is an optional integrated bumper for the Gladiator which simplifies installation even more and complements the functionality of the unit. The bumper eliminates the need to notch the factory bumper or modify it in any way. The bumper has safety chain storage, license plate mount and light, and LED work lights.

Dolly Storage Brackets

A unique dolly storage system allows the customer to easily roll the dollies into the bed and roll them out. There is no climbing over the side of the bed or trying to hold the dollies in the air to get them onto the mounts. They can also be locked into place for added security. Very simple and saves lots of time and energy.

Sandblasted & Powder-coated

When it comes to personalizing the unit, the possibilities are endless! Every Gladiator comes sandblasted with any powder color the customer requests. Match company colors, pick something catchy, or go with a dirt-resistant shade.

Capacities

The Gladiator is built strong to handle the toughest jobs with ease and efficiency. The Gladiator has 4,500 pounds of lifting capacity and 9,000 pounds of towing capacity.

Other Bonus Features Include:

- Negative Tilt
- Hitch Receiver
- Huge 4' bore lift cylinder
- Integrated Tow-light Plug

The Boom & Winch

No other 'in bed' repo unit offers the option to add on a boom (hydraulic or manual) and winch. These additions make your job easier, and increase overall capabilities. The unit includes a 100-foot cable with every boom and winch package. The boom extends and retracts the cable, allowing the customer to guide it wherever you need to recover something.

The addition of the winch allows customers to utilize recovery in just about any situation. For instance, if a customer needs to move a car parked between a house and a sidewall they are able to get in there in ways one never could with a cumbersome tow truck. Plus, you don't have to remove the boom when it comes time for service.

What Does The Gladiator Cost & How To Order One?
