

InventHelp Inventor Develops Winter-Weather Tire Accessories (TOR-9494)

Founded in 1984 in Pittsburgh, Pa., InventHelp is submitting the TIRE CAP to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) April 26, 2016 -- "I heard a lot of people complaining about the cost of a new set of winter tires," said an inventor from North York, Ontario, Canada. "Everyone knows that you need improved traction for winter-weather driving conditions. I wanted everyone to be able to enjoy the added safety of a good set of winter tires without having to spend a lot of money."

He developed the patent-pending TIRE CAP to provide added grip to improve traction on snowy, icy, wet roads. The accessories offer enhanced control when driving in winter-weather conditions. This is designed to optimize roadway safety and give added peace of mind. The devices save the individual from having to purchase a new set of snow tires. In addition, they are easy to install on existing tires and solves the storage problem for existing tires.

The original design was submitted to the Toronto office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-TOR-9494, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
