

InventHelp Inventor Develops Better Rearview Mirror (JAA-120)

Pittsburgh-based InventHelp is submitting the POWER REAR VIEW MIRROR to companies for their consideration and potential feedback.

PITTSBURGH, PA ([PRWEB](#)) June 01, 2016 -- While driving, it can be distracting to fidget with the mirrors, as this preoccupies the driver and takes his or her eyes off the road. In order to make it easier to adjust the rearview mirror, an inventor from Madison, Fla., developed the POWER REAR VIEW MIRROR.

The invention enables the user to control the rearview mirror with ease. The design reduces headlight glare, which enables the driver to see behind the vehicle clearly. This helps the driver to concentrate on the road by eliminating distractions. It is designed to enhance roadway safety. In addition, the unit is adaptable for use with any vehicle.

The inventor's personal experience inspired the idea. "It can be difficult to adjust a vehicle's rearview mirror while driving," he said. "That is why I came up with a modified version that can be adjusted quickly and easily."

The original design was submitted to the Jacksonville office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 11-JAA-120, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
