

TAXI ART

On 13th February, a unique new interactive technology is launched at the Science Museum and www.thisislondon.co.uk. Taxi Art combines London black cabs, the internet and satellite tracking allowing you to create digital art works online tha

Each cab in the 2900-strong Radio Taxi fleet is linked to a dispatch system based on satellite tracking data to ensure that the nearest taxi is the one that picks you up - cutting waiting time and pollution, and keeping London moving.

Now the satellite data is creating art, too. By selecting four individual taxi drivers, assigning each a colour and selecting an artistic style, you can create a unique digital artwork from the taxis journeys. Taxi Art is launched on Radio Taxis' new web site and live at the Science Museum London.

([PRWEB](#)) February 13, 2002 -- Taxi Art is part of Radio Taxis Web Site www.radiotaxis.co.uk. It is made possible because all 2800 drivers on London largest circuit are all connect to a data dispatches system that uses Global Position Satellites to ensure customers are picked up by the nearest taxi.

Taxi Art will be exhibited during half term at the Wellcome Wing of the Science Museum London when an estimated 100,000 people will visit the Museum. Visitors will be able to see this process in operation and learn how the unique interactive art is created and the benefits of satellite tracking in London Public Transport infrastructure.

New Media Company SAS are responsible for designing Taxi Art. They have over 11 years' experience building powerful online representation of customer brands.

Taxi Art will be featured on www.thisislondon.co.uk web site.
