

"TWO TRUCKS MAKE A FULL COURT". TRUCK BASKETBALL WITH PICKUP HOOPS. GREATEST INVENTION FOR THE AUTOMOTIVE WORLD AND THE GAME OF BASKETBALL.

Pickup trucks and the game of basketball have been around for over 100 years. Now they have become Ingeniously Combined. "PickupHoops"

([PRWEB](#)) February 26, 2002 -- Pickup Hoops is a patented portable basketball goal assembly that mounts in the bed of a pickup truck. The base is actually the pickup truck. This means you determine when and where to play some hoops, without relying on the availability of a court.

Pickup Hoops sets up and folds down in under 30 seconds by one person without the aid of a single tool. The assembly is similar to a convertible top in the sense the apparatus will neatly and compactly fold down into the pickup's bed when not in use. When set up for play, the height is adjustable from regulation 10 feet down to 6 feet. Substantial overhang from the rear of the truck is achieved by the innovative design, supplying ample room for baseline play. A pad attaches to the tailgate protecting both players and truck. When the truck is needed for other purposes Pickup Hoops is easily removable.

The Ford/Chrysler/GM edition pickup truck, fully equipped with Pickup Hoops. Its just obvious.

Pickup Hoops gives a wake up call to the Automotive and Sporting Goods world. Both pickup trucks and the game of basketball have been around for over 100 years. Now they have been ingeniously combined. The Inventors our looking to license their patent rights. (313) 534-8734 www.pickup-hoops.net
