

HySecurity Anti-Terrorist Vehicle Barrier HydraWedge™ Wins 2nd 2016 Award

New Wedge Vehicle Barrier HydraWedge SM50 wins yet another security industry award. This next-generation perimeter security barrier wows judges with unique real-time breach reporting, high cycle and exceptionally shallow mount.

([PRWEB](#)) June 22, 2016 -- Government Security News (GSN) announced in June that HySecurity's HydraWedge SM50 won the "Best Fencing, Gates, & Barriers" award in their Airport, Seaport, & Border program.

See http://gsnmagazine.com/node/46657?c=airport_aviation_security.

The GSN program awards product innovations that defend against "very serious national and international threats in land, sea and air," says lead judge Chuck Brooks. "It's an impressive winner's list of outstanding national and international leaders in new technologies and innovative security solutions in air, land and sea protection."

HydraWedge SM50 won its first award this year in the Security Industry Association (SIA) New Product Showcase in April. It won in the Outdoor Perimeter Protection category. See SIA Awards at: <http://www.iscwest.com/SIANPS/2016-Award-Winners/>

HydraWedge SM50 is a next generation anti-terrorist vehicle barrier, unique for its extremely shallow, 9-inch reinforced concrete foundation, real-time perimeter breach reporting, and short, two-day installation. The next HydraWedge SM50s will be installed at a high security financial processing center in the northeast.

"We're grateful for the industry recognition of this breakthrough product," says HySecurity Marketing VP Richard Woltjer. "We were convinced that we had a market winner when we introduced HydraWedge SM50 this year. It exceeds almost all competitor wedge specifications including fast cycle time, high cycle capacity for traffic control, real-time breach detection, and UPS battery backup. It's gratifying that security professionals have come to that conclusion independently."
