

Welcome To The Future Of Electric Cars !

A new technology now makes electric cars practical, this converted DeLorean will run from TN to CA with NO NEED TO PLUG IN TO CHARGE THE BATTERIES !!

([PRWEB](#)) August 10, 2002 -- The quest to find a technology that makes an electric automobile truly practical has been the dream of many an engineer and has been pursued by corporations, large and small, on a Global basis at the cost of Billions of dollars. To date there has been but marginal success.

That is about to change !

Carl B. Tilley and his Tilley Foundation Incorporated are but weeks away from a demonstration drive that will take it's **ELECTRIC** 1981 DeLorean from Tennessee to California without plugging it in. This route will be more than four times the record distance of current electric car technology and, to add another bonus, at the end of the trip the cars batteries with **STILL BE FULLY CHARGED !**

Mr. Tilley conceived of this technology while actively engaged in a solar and wind energy business a number of years ago. In fact, he has dedicated 18 years to the research, development and perfection of the devices he has today. One such technology runs the facility where the DeLorean is undergoing it's transformation, providing the electricity necessary to run the shop and all of it's equipment.

The DeLorean is powered solely by an electric motor and 12 **off the shelf** car batteries from a local chain store **plus** a device of course. The vehicle, Tilley calls it the TEV (Tilley Electric Vehicle), is designed to maintain normal highway speeds as well as a top speed on the order of 120MPH. To quote Tilley, **I hope there's a speed trap when we cross into California, I want to get a speeding ticket after more than 36 hours of operation without the need to plug this baby in.**

Ambitious, you bet. Reality **just wait and see.** You can read more about the Tilley Foundation Incorporated and this fantastic DeLorean conversion on their website: www.tilleyfoundation.com.

Max Plank, formulator of the Quantum Theory, said **A new scientific truth does not triumph by convincing it's opponents and making them see the light, but rather because it's opponents eventually die, and a new generation grows up familiar with it.** The skeptics and naysayers will challenge Tilley, the drive to California will render their criticism meaningless. Be part of the **new generation**, it's here **NOW !**

The Tilley Foundation welcomes you to the future !! **Don't let it pass you by.**
