

Haul Heavy Loads on Three-/Four-Wheelers With THE TRANSPORTER - Designed by InventHelp Client (HUN-187)

Pittsburgh-based invention company InventHelp is submitting THE TRANSPORTER to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) September 17, 2016 -- Moving heavy loads from one site to another can be a very difficult and sometimes impossible task, so an inventor from Livingston, Texas, has developed a reliable way to solve this problem. "I wanted to make lifting and moving heavy object easier with an ATV," he said, "so I designed and made a prototype of THE TRANSPORTER."

This invention enables a user to load and transport heavy objects via a three- or four-wheeler. It avoids strain and struggle, as well as saves time and effort. Suitable for hauling hunted game, bales of hay, machinery, a generator, etc., and producible in design variations, the invention is ideal for hunters, farmers, homeowners as well as those that are physically handicapped.

The original design was submitted to the Houston office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-HUN-187, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
