MECHANICS SOLUTIONS ANNOUNCES NEW SAFETY PRODUCT for the AUTOMOTIVE TECHNICIAN

Mechanics Solutions LLC P.O. Box 932 Imperial, MO 63052 October 22, 2002

Introducing AUTOMOTIVE LIFT JACKETS/FENDER COVERS TM. Dual purpose protective safety pads designed for use in the automotive repair industry. Primary use as protective wraps on automotive lift arms to provide head protection when working under vehicles. Secondary use as fender covers to provide additional padding for comfort and to prevent damage to the vehicle from belt buckles, dropped tools, etc. Automotive lift jackets meet OSHA safety standards and have been in use at several service locations the past 6 months resulting in 100% positive feedback for the protection and comfort they provide.

Automotive lift jackets are tough, durable, military grade nylon and vinyl covered foam pads that are oil, fluid, and flame resistant. Adjustable velcro straps allow for a snug fit on all major brands of lifts and are multi-positional along the length of the lift arm. Easy on/off application.

Automotive lift jackets/fender covers were designed and tested by mechanics - for the mechanic. For photos and more detailed information log on at autoliftjackets.com
