

PJ Trailers deploys Active Web Service's ActiveWeb Warranty to satisfy NHTSA TREAD Act Early Warning Reporting compliance.

AURORA IL - April 1st, 2003 Many of America's most admired trailer companies continue to demonstrate their commitment to produce the safest and most high quality vehicles available.

([PRWEB](#)) April 3, 2003 -- FOR IMMEDIATE RELEASE

The National Highway Traffic Safety Administration's (NHTSA) implementation of the Transportation Recall Enhancement Accountability and Documentation Act (TREAD Act) contains provisions requiring vehicle and equipment manufacturers to report to NHTSA on a wide variety of information that could indicate the existence of a potential safety defect and to advise NHTSA of foreign safety recalls and other safety campaigns. The Act increases civil penalties for violations of the vehicle safety law and provides criminal penalties for misleading NHTSA about safety defects that have caused death or injury.

John Harms General Manager of PJ Trailers said, "Of all the potential solutions available to satisfy the Transportation Recall Enhancement Accountability and Documentation (TREAD Act) Active Web Services offered the best solution. The AWS application will be the easiest to implement use because the navigation is intuitive and will require the least amount of training". Mr. Harris went on to say, "The AWS approach allows us to satisfy TREAD Act reporting as a byproduct of warranty registration and claims processing. And the Terms and Conditions of the AWS Agreement made it easy for us to do business with them."

ActiveWeb Warranty is a powerful claims and warranty management system that satisfies the TREAD Early Warning Requirements. The application provides a simple to deploy web-browser interface for all product registrations, warranty and claims processing including full access to service histories with TREAD Act reporting. Intuitive navigation and online help makes learning the solution quick and easy. ActiveWeb Warranty can implement standalone or fully integrate with existing processes. With a proven implementation model, which includes pre-built interfaces for top ERP and business systems, allows rapid and cost effective deployments usually within days.

About ActiveWebServices

Active Web Services produces powerful solutions that organize the complexity of spare parts, warranty and claims, TREAD Reporting, and aftermarket services into one efficient process.

ActiveWebParts Warranty automates service communications and captures all the necessary data required by NHTSA while increasing service productivity, and eliminating redundant paperwork. Headquartered in Aurora, IL, Active Web Services is a global company.
