

**Stop Auto Theft, Track and Locate Your Vehicle in Seconds Via the Internet Using GPS and Cellular Technologies; Groundbreaking Technology Now Being Sold to the Public at [www.photodigitalgps.com](http://www.photodigitalgps.com)**

*The Millennium Plus Mobile Locating Unit uses cellular airwaves and takes advantage of the global positioning system created by the U.S. government to track cars, motorcycles and recreational vehicles. This system allows users to track and contact vehicles any time day or night via the Internet.*

San Diego, CA ([PRWEB](http://PRWEB)) January 4, 2007 -- The Millennium Plus Mobile Locating Unit uses cellular airwaves and takes advantage of the global positioning system created by the U.S. government to track cars, motorcycles and recreational vehicles. This system allows users to track and contact vehicles any time day or night via the Internet.

Millennium Plus is the first to offer publicly GPS/Internet tracking solutions for all cars, trucks and recreational vehicles. Millennium Plus utilizes a constellation of 24 geo-synchronous satellites providing precise navigation and position information to the GPS receiver. In the event a car is stolen, an email and/or a cell phone call can be used immediately, and the unit owner can disable the vehicle starter and lock the doors. This is perfect for businesses that want to track their vehicles, or perhaps a teen-aged driver or elderly parent who is overdue getting home. Millennium Plus offers affordable safety and security.

Millennium Plus delivers answers to the question, "where?" within seconds, and all via the Internet. This truly revolutionary security and safety technology grants benefits through peace of mind. For information, go to [www.photodigitalgps.com](http://www.photodigitalgps.com)
