

InventHelp® Client Patents “Case Rails” – Invention Could Serve as a Stylish Alternative to Standard Truck-Bed Rails

Pittsburgh-based InventHelp® attempts to submit clients’ inventions to companies for review.

Pittsburgh, PA ([PRWEB](#)) January 04, 2012 -- [InventHelp®, America’s largest invention submission company](#), announces that one of its clients, an inventor from Montana, has designed chains designed to serve as alternative truck-bed rails for aesthetic appeal. This invention is patented and a prototype is available.

The “Case Rails” could help a truck to stand out among other trucks, and would feature an aesthetically appealing and durable design. Ideal for all pick-up trucks, the Case Rail could also make it easier to attach straps in order to secure and fasten a load in the truck bed.

The invention would be powder-coated or chrome-plated link chains that would measure six feet long. Each chain would be welded to chrome-bolt mounts. The mounts could be welded across the top of rectangular metal plates that are attached to the side rims of the bed. A variation to Case Rails could include the attachment of chain segments to small rails, tubing or luggage racks.

“I thought that there needed to be a better-looking truck-bed rail on the market,” said the inventor. “Not only does this make the truck look stylish, it also serves the purpose of facilitating the securing of loads.”

[InventHelp®](#) is attempting to submit the invention to companies for review. If substantial interest is expressed, the company will attempt to negotiate for a sale or royalties for the inventor. For more information, telephone Dept. 10-JMC-678 at (800) 851-6030.
