

InventHelp Inventor Develops Better Motorcycle Helmet (MLB-772)

InventHelp, a leading inventor service company, is submitting the Open Faced Helmet Visor to applicable companies for their consideration.

Pittsburgh, PA ([PRWEB](#)) January 02, 2014 -- Motorcyclists searching for a better helmet option need look no further than the Open Faced Helmet Visor.

Developed by an inventor Glen Waverley, Victoria, Australia, the helmet enables the motorcyclist to quickly and easily deploy the hidden visor system while riding with an open-faced helmet. This design ensures that the rider maintains a normal appearance when the visor is not in use.

Additionally, the device ensures that full face protection is readily available whenever it is needed. The invention saves the rider from having to pull over in order to install an external face shield. The helmet provides a clear, unobstructed view of the roadway, which is designed to offer added safety and peace of mind. In addition, it is producible in different sizes, colors and designs.

The inventor's personal experience inspired the idea. "I am a motorcyclist," he said. "The idea came to me when I was stopped on the roadside in the rain, fixing an external visor to my helmet. I came up with this idea to make sure that my visor was more easily accessible."

The original design was submitted to the [Melbourne office of InventHelp](#). It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 12-MLB-772, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
