

## **Kenall's TekDek™ High Output Parking Luminaire Selected for IES 2016 Progress Report**

*Kenall's new TekDek™ High Output luminaire with TekLink™ TL50 controls has been named to the 2016 Illumination Engineering Society (IES) Progress Report.*

Kenosha, Wisconsin ([PRWEB](#)) October 06, 2016 -- Kenall's new [TekDek™ High Output luminaire](#) with [TekLink™ TL50](#) controls has been named to the 2016 Illumination Engineering Society (IES) Progress Report. The IES Progress Committee must "keep in touch with developments in the art and science of lighting throughout the world, and prepare a yearly review of achievements for the Illuminating Engineering Society." This is the second time a TekDek product has been tapped for the report in the last three years: TekDek TD17 was recognized in 2014.

Earlier this year, the luminaire was also recognized by Next Generation Luminaires (NGL), a partnership that includes IES, as well as the International Association of Lighting Designers and the Department of Energy. "We're very pleased with the recognition that the TekDek High Output Luminaire has received, but we're especially proud of the fact that it is saving energy and creating a safer environment in installations throughout the U.S. and Canada. It sets the standard for sealed, high-output lighting and thanks to the addition of TekLink™ lighting controls, it also meets new state mandates for energy efficiency," said Bill Blackley, Kenall's Director of Product Marketing.

TekDek TD17HO is one of three models of IP65-rated, high-abuse luminaires featuring a range of mounting methods and light distribution options, including a new Type II distribution. Most frequently found in parking garages due to their unique low-glare textured lens, they are also used in other challenging applications from cold storage to warehouses. It features an embedded motion sensor, that when protected behind the vandal-resistant polycarbonate lens, is covered by Kenall's exclusive Peace of Mind Guarantee®. TekDek works seamlessly with TekLink lighting controls, allowing facility managers to remotely control luminaires with the touch of a button.
