

## **Solark Ltd. has the solution for tomorrow's petrol station forecourts.**

*Many consumers tend to spill gasoline on the forecourts at petrol stations during the process of refuelling their automobile. The spillage may be trivial for one refuelling act, however the aggregate effect has an enormous impact on the environment.*

([PRWEB](#)) January 29, 2004 --There are many aspects of today's forecourt that pose a problem for both consumers and station proprietors. Hazardous fumes, surface water contamination and fuel wastage are only a few to name. The onus for these compelling effects lies on one trivial event: the inadvertent spillages of residual fuel upon removal of the nozzle.

The amount dribbled may be trivial during an individual transaction, however the aggregate effect is tremendous. According to Aiden Feeney, Managing Director of Solark Ltd, 5 - 10 millilitres of fuel drips on the forecourts of the UK during every transaction. Extrapolated over some 29 million UK vehicles in 2001, annual wastage totals some 6.8 Million imperial gallons. Thus, from a wider environmental perspective, the cumulative wastage represents a notable issue.

### Green Genie Fuel Saver

Solark's response to this dilemma is the Green Genie Fuel Saver. This ingenious invention consists of an in-line secondary automatic shut-off valve, at or adjacent to the output end of a fuel dispenser delivery line. The design is configured to inhibit spillage and attendant wastage of residual fuel in a delivery nozzle downstream of a primary control/regulator valve.

The Green Genie fuel saver has confirmed in many tests to effectively inhibit dribbles during the refuelling process. In addition to its efficacy, the Green Genie Fuel Saver is inexpensive to manufacture, install and maintain. It is now hard for the petrol industry to deny its responsibility towards the environment and its consumers with the economically feasible Green Genie Fuel Saver.

### About Solark

Solark Ltd. is located at Wellesbourne in Warwickshire. Solark Ltd. is a turnkey solutions company solving problems that occur on a day-to-day basis. For further information go to <http://www.solark.co.uk> or contact Solark Ltd at +44 (0) 1789 842023.
