

InventHelp Introduces Device - Facilitates Fuel Transferral (DLL-2627)

Pittsburgh-based InventHelp is working to submit this idea, the Permutation Pump, to applicable companies for their review and consideration.

Pittsburgh, PA ([PRWEB](#)) December 31, 2013 -- An inventor from Crowley, Texas, wants to offer people a better and more convenient way to perform fuel transferral. "While working on my show car I needed to transfer fuel into and out of its fuel tank," he said. "My design resulted from this necessity."

He then created a prototype of the PERMUTATION PUMP, a device that provides an easier way to transfer fuel. It eliminates the need for siphoning, as well as saves time and effort. In addition, it helps disabled vehicles. Lightweight, portable and easy to carry, the device is ideal for households, car restorers, car-club members, lawn-equipment operators, etc.

The original design was submitted to the Dallas office of [InventHelp](#). It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 12-DLL-2627, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
