

InventHelp Inventor Develops Improved Stop Sign (LGI-2169)

One of America's leading invention submission companies, InventHelp is submitting the STOP SIGN to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) August 03, 2016 -- "I think that a lot of times when people blow a stop sign, it is because they never saw it in the first place," said an inventor from Brooklyn, N.Y. "To reduce the incidence of collisions at intersections, I designed a stop sign with a more highly visible design that will not be missed."

He developed the STOP SIGN to be clearly visible both night and day. The design attracts the attention of passing motorists, which ensures that traffic comes to a complete stop at the intersection. This helps to reduce the incidence of collisions, which is designed to enhance roadway safety. All of this provides added peace of mind.

The original design was submitted to the Long Island office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-LGI-2169, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
