

InventHelp Inventor Develops Child Seat and Stroller Combo (OCC-1056)

InventHelp, based in Pennsylvania, is submitting the RETRACTABLE CAR SEAT to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) August 11, 2016 -- "I watched mothers struggle to carry heavy child seats with babies in them or fuss with heavy attachments to make their child seats into strollers," said an inventor from Laguna Niguel, Calif. "As a new mom myself, I knew that there had to be a better way to design a car seat/stroller combo."

She developed the patent-pending RETRACTABLE CAR SEAT to easily convert from a child's car seat to a stroller. The design eliminates the need to carry a heavy car seat with a child inside. It also saves the user from having to connect heavy attachments to make the car seat into a stroller. All of this reduces physical stress and strain, alleviating pain and soreness. The unit is made of super-lightweight materials. Additionally, the device is producible in different sizes and colors.

The original design was submitted to the Orange County office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-OCC-1056, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
