

Seat Belt Pull Invented by InventHelp Client (TPA-2215)

InventHelp, founded in 1984 in Pittsburgh, is submitting the EASY GRAB STRAP to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) August 15, 2016 -- Despite the emphasis on buckling up for safety, too many motorists, still do not wear seat belts because they are difficult to reach. Fortunately, an inventor from Sarasota, Fla., has found a way to make it easy to comply with seat belt laws.

He developed EASY GRAB STRAP to provide an easy way to grip and pull the seat belt latch across the body and buckle it. It is particularly beneficial for those who are obese, elderly or short or have back problems. As such, it improves automobile safety by encouraging the use of seat belts. At the same time, it eliminates pain and discomfort from twisting to reach the seat belt buckle. In other words it is safe, safe, convenient and comfortable. It is also lightweight, easy to install and use, practical, affordable and attractively-styled. In addition, its simple design minimizes production costs.

The inventor's personal experience inspired the idea. "I decided to pursue this idea after I hurt my back on the job and found it extremely painful to reach for the seat belt, locate it and pull it down to fasten it," he said.

The original design was submitted to the Tampa office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-TPA-2215, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
