

Inventor and InventHelp Client Develops Improved Children's Car Seat (CIC-117)

InventHelp, founded in 1984 in Pittsburgh, is submitting the COOL BABY to companies in the hopes of their good faith review.

PITTSBURGH, PA ([PRWEB](#)) August 16, 2016 -- "My son was always soaked with sweat when I took him out of his rear-facing car seat, even when I had the air conditioner on full blast," said an inventor from Des Plaines, Ill. "I thought that a car seat could be designed better so that children did not get so hot sitting in the seat."

He developed the COOL BABY to keep the child cool and comfortable. The invention prevents the child from overheating while sitting in the car seat by reducing sweating. This makes road trips more comfortable and enjoyable for both parents and child. It also helps parents to remember to take the child along with them when exiting the vehicle. All of this is designed to enhance the child's safety. Additionally, the seat is ideal for use in areas prone to hot weather with the latest technology.

The original design was submitted to the Chicago office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-CIC-117, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
