

Inventor and InventHelp Client Develops Assistance Unit for Docking a Trailer (CCT-2048)

Based in Pittsburgh, Pa., InventHelp is submitting the DOCK LINER to appropriate companies for their review.

PITTSBURGH, PA ([PRWEB](#)) August 17, 2016 -- "As a truck driver, docking a trailer at night is difficult because I cannot really see where I am going," said an inventor from Mount Sterling, Ky. "It is also difficult to dock the trailer when it is snowing, raining or foggy. I thought that there had to be a more precise way to dock a trailer."

He developed the DOCK LINER to provide guidance so that a truck driver can reverse up to the dock. The unit makes it easier to line the truck and trailer up square with the dock. The highly visible guide eliminates guesswork and confusion. The accessory enables the driver to avoid colliding with the dock and other objects. It also offers added peace of mind and safety. Additionally, the device is ideal for use at night and during poor-visibility conditions.

The original design was submitted to the Cincinnati office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-CCT-2048, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
