

Sustainable Road Based Alternative Produces Huge Cost-Savings

Cypher International Ltd. has successfully introduced their EarthZyme soil stabilization technology in all continents of the world. The widespread use of EarthZyme will save the purchasing authorities millions of dollars per year. EarthZyme is the ideal sustainable solution to roads and any other type on infrastructure related application.

([PRWEB](#)) March 3, 2004 -- Cypher International Ltd.'s EarthZyme is the benchmark of recent innovations in regards to construction materials. EarthZyme is a 100% environmentally friendly soil stabilizer that was specifically designed to improve and enhance the workability, mixability, binding and compaction of clay based soils. The end result of an EarthZyme application is an extremely cost-effective material that is ideal for road building as well as a number of other construction applications. EarthZyme treated materials are very impermeable, prevent erosion, exhibit enormously high weight bearing characteristics, are not affected by freeze/thaw conditions, can be applied using ordinary construction equipment and are 100% environmentally friendly.

The continued use of EarthZyme within any infrastructure system has the ability to potentially save governments millions of dollars each year, as comparisons show that the cost of building an EarthZyme road is on average one fifth the cost of building roads using conventional construction materials. Various EarthZyme projects are currently being constructed in many regions of the world as the significance of the product's benefits are being observed on a continual basis. What began with roads has evolved into a multitude of infrastructure applications, which explains why the potential savings involved with the widespread use of EarthZyme are constantly growing.

By using EarthZyme and saving vast sums of money on infrastructure expenses, it allows for money to be re-invested in other vital areas. EarthZyme has been successfully implemented in a number of countries throughout the world, all of which will have already begun to enjoy the product's continuous benefits. Cypher International Ltd. has a constantly evolving web-site that frequently posts newly completed EarthZyme projects upon their completion. Please visit www.cypherltd.com for a sample of EarthZyme completed projects and up to date information on all Cypher International Ltd. endeavors.
