

InventHelp Inventor Develops Partitioning Device for Uber Vehicles - Designed by InventHelp Client (CIC-216)

InventHelp is working to submit this idea, the UBER SAFE, to companies in the hopes of their good faith review.

Pittsburgh, PA ([PRWEB](#)) December 18, 2016 -- "My daughters drive for Uber at night, and I worried about their safety," said an inventor from Lynwood, Ill. "Because they have no idea who they might be picking up, I thought that there should be some form of barrier between the driver and passengers."

He created a prototype for the UBER SAFE to create a barrier between the driver and passengers. This prevents unruly passengers from touching, assaulting, harming or otherwise distracting the driver, which improves the safety of Uber drivers. The device features a lightweight, easily portable design that is adaptable for use in any vehicle. Additionally, it is easy to set up and take down.

The original design was submitted to the Chicago office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-CIC-216, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
