

## **Child Safety Alert System Invented by InventHelp Client (ALL-909)**

*A leading invention service company, InventHelp is submitting the CHILD SEPARATION DETECTOR to companies for their review.*

PITTSBURGH, PA ([PRWEB](#)) March 28, 2017 -- While automobile manufacturers continue to prioritize safety, they still have not found a way to build into their vehicles a reminder for parents or caregivers that a child is still present in a car seat and in danger of being left behind when the car is turned off. Fortunately, an inventor from Marietta, Ga., has found a way to drastically reduce the number of this type of deaths that occur each year.

She developed CHILD SEPARATION DETECTOR to alert parents and caretakers when they are separated from their child within a preset range. As such, it prevents children from being left behind in a locked car unattended. At the same time, it helps parents keep track of their children and protect them both inside and outside the home. Thus, it protects children against injury, trauma and death. Other appealing features are its light weight, compact size and portability. This invention is also easy to use, durable and practical. In addition, it is convenient, effective and affordably priced.

The inventor's personal interest inspired the idea. "Concerned about the high incidence of heat-related deaths of children who were forgotten and left in locked cars, my goal was to provide protection for children and peace of mind for their parents," she said.

The original design was submitted to the Atlanta 3 office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
