

Inventor and InventHelp Client Develops Improved Valve Stem (BMA-4488)

InventHelp, founded in 1984 in Pittsburgh, is submitting the FRONT LOAD VALVE STEM to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) November 14, 2015 -- "I have been in the auto industry for 20 years, and I also used to race cars and love working on cars, so I know a lot about the needs of motorists," said an inventor from central N.H. "I always thought that it should be possible to install a new valve stem without breaking down the tire."

He developed the patent-pending FRONT LOAD VALVE STEM to make it easier to remove and replace a valve stem. The design eliminates the need to break down the tire and wheel in order to install the new valve stem. This saves time and effort, and reduces hassles and frustrations. Furthermore, it is adaptable for use with new and existing vehicles, as well as with the tires on other equipment.

The original design was submitted to the Boston office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-BMA-4488, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
