Key Fob Case Invented by InventHelp Client (ICG-100)

InventHelp, based in Pittsburgh, Pa., is submitting the KEYLESS REMOTE PROTECTOR COVER to companies for their review.

PITTSBURGH, PA (PRWEB) November 19, 2015 -- If you’ve ever had to replace your car’s key fob because it was damaged, you know how expensive that can be. Fortunately, because of the creativity of an inventor from Chicago, Ill., you’ll no longer have to worry about that.

He developed KEYLESS REMOTE PROTECTOR COVER to protect an automobile keyless remote against breakage when dropped. What’s more, it insulates the key fob against dirt, grime, dust and other adverse conditions. As a result, it saves the expense of replacing a damaged remote. In other words, it keeps the fob clean and fully operational. As such, it provides peace of mind for concerned vehicle owners. Besides all that, it is convenient, effective and affordably priced. In addition, it is portable, compact, lightweight and easy to use.

The inventor’s personal experience inspired the idea. “After I accidentally dropped and broke my keyless remote for my car and had to pay $150 for a new one, I wanted to find a way to prevent that from happening again,” he said.

The original design was submitted to the Chicago office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-ICG-100, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
