

## **Windshield Protector Invented by InventHelp Client (RGL-122)**

*One of America's largest invention companies, InventHelp is submitting the WINTER WINDOW COVER to companies for their consideration.*

PITTSBURGH, PA ([PRWEB](#)) August 25, 2016 -- Since motorists cannot always park their cars in a garage in the bad weather, they often struggle to remove snow and ice from the windshield when they return to the car. Fortunately, that will no longer be a problem thanks to the creativity of an inventor from Moses Lake, Wash.

He developed WINTER WINDOW COVER to keep frost, ice, freezing rain and snow from accumulating on the windshield. It thus eliminates the need to manually scrape ice and brush snow off the windshield. At the same time, it avoids the discomfort of cold wet hands, wet clothes and muscle strain associated with cleaning off an icy windshield. Furthermore, it improves driver visibility and travel safety. However, it will not scratch the paint of the car. It is also compact, lightweight and easy to store. In addition, it is convenient, effective, easy to apply and remove and affordably priced.

The inventor's personal experience inspired the idea. "I wanted to avoid having to spend so much time out in the cold winter weather brushing snow and scraping ice off my car windshield," he said.

The original design was submitted to the National Sales office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
