

InventHelp® Client Invents Down Bracket (BGF-900)

Pittsburgh-based InventHelp attempts to submit an invention, Down Bracket, to companies for review.

Pittsburgh, PA ([PRWEB](#)) September 21, 2016 -- An inventor, from Wayland, Mich., thought there needed to be a safe and secure way to transport a large load, so he invented the Down Bracket.

The Down Bracket provides a more secure way to transport large loads on a trailer or truck bed. In doing so, it helps to prevent items from shifting and falling. As a result, it enhances safety and protection. The invention features a durable design that is convenient and easy to use so it is ideal for truck and trailer owners. Additionally, the Down Bracket is producible in design variations and a prototype is available.

The inventor described the invention design. “My design helps to prevent loads from shifting, spilling or sliding around while traveling.”

The original design was submitted to the Bingham Farms office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-BGF-900, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
