

Inventor and InventHelp Client Develops Effective Simulator for Driver Testing (SAH-1024)

A leading inventor service firm, InventHelp is submitting the AUTOMOTIVE SIMULATOR to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) October 01, 2016 -- "I thought that there had to be a safer, more realistic way for new drivers to begin learning the rules of the road," said an inventor from Fairfield, Calif. "Also, a system such as this would be helpful with testing and re-training older drivers, as well as those who have had their licenses suspended."

He developed the patent-pending AUTOMOTIVE SIMULATOR to provide a realistic driving experience. The system simulates potential real-life roadway situations to see how the driver reacts. This enables individuals to practice driving in a safe environment that will not pose a threat to themselves or others. It effectively trains and tests drivers. It is designed to train safe, defensive drivers. Furthermore, the system streamlines the whole process of training and testing drivers.

The original design was submitted to the Sacramento office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-SAH-1024, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
