

Leak Proof Tire Invented by InventHelp Client (OCC-1092)

A leading inventor service firm, InventHelp is submitting the LEAK RESISTANT TREATMENT to companies for their review.

PITTSBURGH, PA (<u>PRWEB</u>) October 15, 2016 -- Accident reports demonstrate, all too vividly at times, how dangerous a flat tire can be. That is exactly what an inventor from Mission Viejo, Calif., was concerned about when he decided to pursue an idea that would alleviate that danger.

He developed a prototype for LEAK RESISTANT TREATMENT to reduce the chances of a flat tire or blowout. As such, it prevents the air in the tire from leaking when punctured. It, therefore, eliminates the need to change a flat tire on a busy roadway. It, thereby, promotes highway safety by preventing flat tire-related automobile accidents resulting in injuries, deaths or property damage. It naturally follows that it lowers the number of automobile insurance claims filed. It also reduces the incidence of police reports. In addition, it avoids frustration and delays associated with flat tires.

The inventor's concern for keeping motorists safe inspired the idea. "I wanted to improve highway safety by providing motorists with a tire that will not deflate when punctured particularly when the car is in motion," he said.

The original design was submitted to the Orange County office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-OCC-1092, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
