

## **Inventor and InventHelp Client Develops Alert System for Approaching Emergency Vehicles (ROH-228)**

*InventHelp, founded in 1984, is submitting the 9-1-1 ROAD ALERT to companies for their consideration and possible feedback.*

PITTSBURGH, PA ([PRWEB](#)) October 17, 2016 -- "I was driving, and there was an emergency vehicle within less than 100 feet of my car, but I could not hear its sirens because my music was too loud, nor did I see its flashing lights in my rear-view mirror," said an inventor from Lockport, N.Y. "That led me to develop this warning system."

He developed the patent-pending 9-1-1 ROAD ALERT to make the driver aware of an approaching emergency vehicle. This ensures that the driver knows that there is an EV approaching, even if he or she is listening to loud music or not checking mirrors. It allows EVs to arrive at their destination in a timely manner. The system reduces the risk of collisions and accidents, which is designed to enhance roadway safety. Additionally, it is adaptable for use with both new and existing vehicles.

The original design was submitted to the Rochester office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-ROH-228, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
