

Windshield Wipers with Scrubbing Capability Invented by InventHelp Client (ROH-233)

InventHelp, based in Pittsburgh, is submitting the STEALTH VISION II to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) October 17, 2016 -- While traditional windshield wipers are designed to clean and keep moisture from obstructing the driver's view, they often are ineffective in removing stubborn grime like bugs and mud. Fortunately, an inventor from Depew, N.Y., has found a way to remove dried-on road grime left behind by traditional wipers.

She developed a prototype for STEALTH VISION II to provide an easy way to remove dead insects, dirt and other debris from motor vehicle windshields. As such, it eliminates the need to stop the vehicle and manually clean the windshield. It, therefore, saves time and effort. At the same time, it improves driver visibility and enhances highway safety by reducing the chances of visibility-related motor vehicle accidents. It is also convenient, easy to install and use and affordably priced. In addition, it is durable for years of effective use.

The inventor's personal experience inspired the idea. "We like to travel and take off-road trail rides on ATVs. However, we soon got tired of having to stop and waste time and effort cleaning dead insects and other dirt off the windshields," she said.

The original design was submitted to the Rochester office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-ROH-233, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
