

InventHelp Inventor Develops Convenient Tool for Automotive Mechanics (DLL-3046)

InventHelp, based in Pittsburgh, Pa., is submitting the DRAGON CLAW to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) October 23, 2016 -- "This tool design came to me in a dream the same night that I dropped a bolt that damaged a part of an engine," said an inventor from Grand Prairie, Texas. "This incident cost me over \$600, and I do not want someone to have to repeat the same expensive mishap."

He created a prototype for the patent-pending DRAGON CLAW to make it easier to begin threading nuts and bolts. The design allows bolts and nuts to be accessed in difficult locations. It also prevents the bolt or nut from falling off, which reduces the risk of damaging sensitive components. Furthermore, the tool provides a firm, secure grip so that the user can apply sufficient torque.

The original design was submitted to the Dallas office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-DLL-3046, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
