

Plate Mate Invented by InventHelp® Client (ALL-761)

InventHelp, America's leading inventor service company, attempts to submit an invention, Plate Mate, to companies for review.

Pittsburgh, PA ([PRWEB](#)) October 26, 2016 -- An inventor, from Dahlonaga, Ga., thought there needed to be a better way to fasten and secure a vehicle's license plate, so he invented the Plate Mate.

The Plate Mate provides a unique and effective way to fasten and protect a vehicle's license plate. In doing so, it enhances security and peace of mind. It also eliminates the need to drill holes into the vehicle yet allows the use of all four license-plate holes. The invention features a practical and weatherproof design that is easy to install and use so it is ideal for vehicle owners. Additionally, the Plate Mate is producible in design variations and a prototype is available.

The inventor described the invention design. "My design helps to silence license plate vibrations, and will revolutionize the way license plates are fastened to vehicles. It is much more than just a security kit. It solves a problem that has been overlooked for such a long time."

The original design was submitted to the Atlanta office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-ALL-761, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
