

Automotive Deodorizer Dispenser Invented by InventHelp Clients (OCM-1105)

InventHelp is attempting to submit this idea, the CAR AIR FRESH, to companies for their consideration.

PITTSBURGH, PA (<u>PRWEB</u>) November 17, 2016 -- Telltale odors left behind by cigarettes, food or beverages can make traveling by car quite unpleasant. Fortunately, two inventors from Downy, Calif., have found a way to replace those odors with a variety of fresh smelling scents for a much more enjoyable ride.

They developed the patent-pending CAR AIR FRESH to specifically keep the interior of a motor vehicle smelling clean and odor free. It does so by allowing the user to control how often and how much of a new air-cleaning substance is dispensed. In other words, it can be programmed to release a pleasant scent at predetermined times. It, therefore, enhances the travel experience in a motor vehicle. At the same time it is easy to install and operate. In addition, it not only saves time and effort, it is also convenient, effective and affordably priced.

The inventors' personal observation inspired the idea. "We noticed that current vehicle air fresheners on the market cannot be turned off and, therefore, quickly decrease in effectiveness," one of them said. "We wanted something that would not need replaced very often and that could be dispensed by the user as needed."

The original design was submitted to the Orange County office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-OCM-1105, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
