

After-Market Automobile Armrest Invented by InventHelp Client (SFO-330)

InventHelp is working to submit this client's idea, the CARMREST, to appropriate companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) January 11, 2017 -- "I thought of this while driving on long car trips," said the inventor from South San Francisco, Calif. "The design would reduce stress on the driver's left or right arm and help to make long trips more comfortable."

He created a prototype for the patent-pending CARMREST as an aftermarket accessory for automobiles. The design would secure to the inside of a vehicle driver's door. The invention is easy to apply and remove on any motor vehicle and could be modified to accommodate a passenger's door.

The inventor explained, "Not only would this design help to reduce arm fatigue on long trips, people who drive professionally may also benefit from added comfort and avoid repetitive stress related injuries."

The original design was submitted to the San Francisco office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-SFO-330, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
