

InventHelp Inventor Develops Improved Automotive Jack System (OLC-117)

InventHelp is submitting this idea, the EASY JACK, to applicable companies in the hopes of their good faith review.

PITTSBURGH, PA ([PRWEB](#)) November 17, 2016 -- "I thought that there had to be simpler, more convenient way to develop an automotive jack system so that it could be usable by all types of motorists, especially those with limited mobility," said an inventor from Oklahoma City, Okla. "My jack system makes changing a flat much easier."

He developed the EASY JACK to provide a safer, easier and more efficient and easy way to lift and lower a vehicle to change a flat tire. The invention eliminates the need to struggle with a standard jack because EASY JACK is always on the correct spot on the vehicle. The design reduces physical stress and strain. This makes the system ideal for use by all motorists. Motorists with limited mobility, including the elderly and the disabled will love this system! It is suitable for use with both new and existing vehicles. Additionally, it is suitable for home service and repairs.

The original design was submitted to the Oklahoma City office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-OLC-117, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
