

## **Inventor and InventHelp Client Develops Improved Traffic Barricade (PIT-350)**

*InventHelp is attempting to submit this idea, the E Z BEAR-A-CADE to appropriate companies for their consideration.*

PITTSBURGH, PA ([PRWEB](#)) November 19, 2016 -- "As a police officer, I saw that a lot of my fellow officers were not be put to their optimal use," said an inventor from Wattsburg, Pa. "Rather than having officers block traffic, I devised a better barricade system that is easily portable and easy to set up."

He created a prototype for the E Z BEAR-A-CADE to offer an efficient way to block off traffic. The device allows traffic to be redirected without the need for multiple police officers, firefighters or emergency crews to be on scene. This frees up personnel so that they can be deployed where they are most needed. The barricade features a lightweight, easily portable design that can be stored in the trunk of a motor vehicle. The design allows for quick and easy setup and take down. Furthermore, the barricade is designed to be highly visible to reduce the risk of collisions and enhance roadway safety. Its compact design allows one vehicle to hold multiple units in storage.

The original design was submitted to the Pittsburgh office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-PIT-350, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
